TruthOps report — case `smoke4`

> LIVE run — neatHack 2026. Evidence is fixture-backed for benchmark comparability; live adapters enriched where available (see JSON report for per-adapter status and spend).

Overall characterization: TRUE Recommended posture: Affirm with evidence

Claim verdicts

Claim	Verdict	Confidence (initial → revised)
claim	**mostly_true**	0.93 → 0.93

Key messages

- Claim 'Gasoline is now below $2.30 a gallon in most states.': MOSTLY TRUE (85/100).
- Notes: Smoke test 4: mostly true, minor imprecision.

Approval gate

External actions: **BLOCKED** — publish / post / notify all blocked pending explicit human approval.

Evidence (scored)

- `ev-claim-1` [fixture] supports `claim` — score 0.85 (reliability 0.85 × relevance 1.0) | primary=True | SYNTHETIC fixture

Contrarian challenges

- **claim**: agreed=True; confidence 0.93 → 0.93

Calibration note

Pipeline: mostly_true (85/100). **Expected band:** 80–90 mostly_true ✓
FactCheck.org: rates the underlying claim FALSE — "In no state was the average that low. And the nationwide average is $2.94." (State of the Union fact-check, Feb 2026)

The pipeline's verdict matches the calibration band but contradicts FactCheck.org's assessment. This suggests the fixture's expected band may need revision, or the pipeline is overweighting the "prices have declined" framing vs. the specific "$2.30 in most states" threshold. Flagged for review.
